

### **Text 1**

I lost my wallet with all my money while on a trip to a countryside village. A kind old woman found me and gave me my wallet back, minus a few coins. I remember that moment very well; it made an impression on me. Honesty is a valuable attribute, and I have never forgotten the lessons learned that day.

### **Text 2**

Florence Nightingale was born into a prestigious British family on May 12, 1820. She had two siblings and excelled in many subjects in school. Despite her mother's efforts to make her socialize with top-tier families, Florence preferred to stay away from attention and spent more time alone. She was very strong-willed and often clashed with her mother who viewed her as too disobedient. Despite their disagreements, Florence loved her mother dearly.

### **Text 3**

Chloroplasts in Antarctic plants grown near the coast tend to have a dense packing of chloroplasts near the cell wall. Chloroplasts in these cells have round, dense stroma and well-developed granal thylakoids. There are numerous stromal thylakoids that are linked together into granal stacks. Small osmiophilic plastoglobuli also occur between thylakoids in the stroma. In some cases, chloroplasts in the foliar mesophyll cells have irregular shapes with protrusions and pockets or invaginations within organelles that lead to an increase in surface area and volume of substances exchanged between cytoplasm and chloroplasts or other organelles. Deformed surfaces of chloroplasts have been observed in ultrastructural research of mesophyll cells from *C. quitensis* plants collected in Antarctica.
